PROFESSIONAL SUMMARY

Developer with a completed university curriculum in Computer Engineering (UNET), 8+ years building web applications with Vue.js, React and Laravel, and 4 years of full-time remote experience with distributed teams. I lead legacy system migrations to modern architectures without interrupting the product, optimize frontend performance, and integrate applied AI (RAG, LLMs and function-calling agents) into real products. I deliver by milestones with clean code, unit tests and clear written asynchronous communication.

Currently: continuing training in applied AI engineering (RAG, LangGraph, agents) with public projects on GitHub; available immediately.

TECHNICAL SKILLS

- **Frontend:** Vue.js (Vue 3, Nuxt.js, Vuex, Pinia), React.js (Next.js, Redux), TypeScript, JavaScript, HTML5, CSS3, Tailwind CSS, Vuetify, SASS, BEM, Three.js, Canvas, responsive design
- **Backend:** Node.js, Express, PHP, Laravel, Yii2, REST APIs, GraphQL (Apollo Server), token-based authentication (Sanctum, JWT), multi-tenant architectures
- **Databases:** MySQL, PostgreSQL, Oracle, Prisma ORM, query optimization, relational schema design
- **Artificial Intelligence:** LLM integration (OpenRouter, Cohere, OpenAI), RAG, function calling, conversational agents, prompt engineering; AI-assisted development workflows (Cursor, CodeRabbit)
- **Tools & methodologies:** Git, GitHub Actions (CI/CD), Docker, SCRUM, Spec-Driven Development, unit testing (PHPUnit, Vitest), code reviews
- **Mobile:** Flutter, React Native (Expo)

PROFESSIONAL EXPERIENCE

Livelaps — Full-Stack Web Developer · Remote Feb 2022 – Mar 2026

- Migrated 5+ modules of a legacy PHP Vanilla system to Vue.js and Nuxt.js with full functional parity, cutting frontend page load times by ~30%.
- Developed business logic in Laravel and optimized MySQL queries powering the product's core flows.
- Drove the adoption of AI tools (Cursor, CodeRabbit) in the team's daily workflow, reducing code review time by ~25%.
- Maintained responsive visual consistency during the incremental transition of modules to React.js, working directly with the design team.

Villartech C.A. — Full-Stack Web Developer · Hybrid Oct 2020 – Feb 2022

- Led the frontend migration of a legacy product to Vue.js with Vuetify across 3+ projects sharing a multi-tenant Laravel API with roles and permissions.
- Built the web client of a social network consuming Laravel REST services (AngularJS frontend).

Feedback C.A. — Frontend Developer · Hybrid Jul 2019 – Aug 2020

- Developed modular, responsive interfaces in React with Redux for Came Pagos (payment gateway) and Medullaris.

- Implemented a Spanish/English i18n system in PHP for El Callao and admin consoles in Yii2 with Bootstrap for Abitab.

Villartech C.A. — Full-Stack Web Developer · Hybrid

Dec 2018 – Apr 2019

- Designed and developed a Laravel REST API consumed by a React frontend with Redux (Blockstart project).

Develoop Software — Freelance Full-Stack Developer · Remote

May 2017 – Oct 2018

- Built Callmed's interactive frontend with Vue.js, WebSockets and geolocation (Google Maps API) on a Laravel MVC architecture with role management.
- Developed for Aignep an interactive 3D configurator for compressor installations (Three.js and Canvas), a dynamic multilingual website and a Laravel backend with Doctrine; designed the data model and performed black-box QA.
- Developed Audita's Laravel backend and server-side data processing.

Earlier Experience

2015 – 2016

- Udatobox (Jul 2015 – Jun 2016): developed end-to-end a legal case-management software (Yii2, jQuery, Ajax) — design, development, server administration and later migration to a REST API.
- Sisteberca C.A. (Sep 2016 – Dec 2016): maintained Banesco Panamá's web platform (WordPress): code, views and plugins.

SELECTED PROJECTS

- **Amsterdam to Vzla** — AI-powered multi-tenant e-commerce: built a monorepo ecosystem with Next.js 14, React Native (Expo) mobile app, multi-currency payments, Socket.io, Prisma and LLMs via OpenRouter. github.com/lesm23031990/amsterdam-to-vzla
- **SportFlow** — Flutter mobile app with a GraphQL API (Apollo Server) and a conversational AI agent using Cohere and function calling. github.com/lesm23031990/SportFlow
- **CashFlow POS** — point of sale and daily cash-flow control: React with TypeScript, Node.js/Express REST API, taxed sales, cash register and inventory. cashflow-pos.onrender.com
- **Professional portfolio** — Vue 3 SPA with AI-assisted chat, i18n and CI/CD deployment. [Isalasdeveloper.me](https://isalasdeveloper.me)

EDUCATION

Computer Engineering — Universidad Nacional Experimental del Táchira (UNET), Venezuela

Full academic curriculum completed (2019). Degree certification in progress.

LANGUAGES

- Spanish: native
- English: intermediate (B1) in active development — fluent technical reading of documentation and specifications; written asynchronous communication in remote environments
