Computer Engineer | Frontend Specialist & AI Engineer in Training

Computer Engineer with over 8 years of experience, specialized in the JavaScript ecosystem and high-precision frontend development. I possess a strong logical and mathematical foundation, enabling me to approach complex algorithmic problems with scientific rigor. I am currently transitioning my career toward an AI Engineer role, leveraging my analytical capabilities for training, evaluating, and refining Large Language Models (LLMs).

My experience stands out in building modular and scalable interfaces (Vue.js, React), with solid fullstack integration skills (PHP, SQL). I am a code-quality-oriented professional, with advanced technical reading skills in English and high adaptability to master emerging technologies in the field of Artificial Intelligence.

EDUCATION

2019 – *Computer Engineering (GPA: 5.85)*

National Experimental University of Táchira – San Cristóbal, Venezuela

TECHNICAL PROFILE & SKILLS

Software Engineering & Artificial Intelligence (Transition Phase)

- ❖ **AI Focus:** Actively training as an AI Engineer, with emphasis on training, evaluation, and fine-tuning of Large Language Models (LLMs).
- ❖ **Logical-Mathematical Foundations:** Advanced analytical skills for solving complex algorithms, validating logical reasoning, and mathematical structures—critical for high-precision AI model training.
- ❖ **Methodologies & Quality:** Academic knowledge of the Software Development Life Cycle (SDLC), quality assurance (QA) through white-box/black-box testing, and Agile methodologies (SCRUM).

Frontend Specialization & JavaScript Ecosystem

- ❖ **JavaScript Architecture:** Advanced proficiency in JavaScript, including asynchronous programming, DOM manipulation, complex state management (Redux, Vuex), and efficient rendering.
- ❖ **Component Frameworks:** Strong experience building modular solutions with Vue.js, React.js, and Angular.js, optimizing performance and scalability on the client side.
- ❖ **Visualization & Graphics:** Development of interactive experiences and data visualization

- using Three.js and Canvas manipulation.
- ❖ **High-Precision UI Development:** Expertise in CSS architecture (BEM, SASS), responsive design, and design systems such as Bootstrap, Materialize, and Vuetify, ensuring accessibility and visual accuracy.

Fullstack & Backend Development (Integration Capability)

- ❖ **API Development:** Ability to build and consume RESTful services connecting frontend layers with backend logic using Node.js or PHP (Laravel, Yii2).
- ❖ **Data Management:** Advanced skills in relational schema design and execution of complex SQL queries using MySQL, PostgreSQL, and Oracle.
- ❖ **Algorithmic Programming Languages:** Strong programming foundations in C, C++, C#, and Java acquired in academic environments.

Infrastructure & Tools

- ❖ **Version Control:** Professional experience with collaborative workflows using Git (GitHub, Bitbucket) and SVN.
- ❖ **Systems & Networking:** Basic knowledge of system administration (Linux/Windows) and network protocols and routing configuration.

LANGUAGES

- ❖ **Spanish:** Native
- ❖ **English:** Technical level (reading documentation, engineering specifications, and AI research papers). Basic conversational level in active development.

WORK EXPERIENCE

Livelaps – Fullstack Web Developer | February 2022 – March 2026

- **Technology Migration:** Migrated legacy PHP systems to modern frameworks (Vue.js / Nuxt.js), ensuring feature parity and improved frontend performance.
- **Fullstack Implementation:** Developed backend business logic using Laravel and managed MySQL database queries.
- **AI Tool Adoption:** Integrated tools like Cursor and CodeRabbit into daily workflows for code generation, review, and optimization, initiating transition toward AI-assisted development.
- **Tooling & Standardization:** Used pnpm for dependency management and Prettier for code consistency. Supported migration of modules to React.js.
- **Complex Problem Solving:** Translated technical specifications into functional code, applying algorithmic logic and mathematical reasoning.

Villartech C.A. – Fullstack Web Developer | October 2020 – February 2022

- **Sogcial: Frontend development;** backend API built with Laravel services consumed by AngularJS frontend.
- **Livelaps:** Migration of legacy systems to modern technologies; fullstack role with Laravel backend services supporting multiple frontend applications (Vue.js + Vuetify), including role and permission management.

Feedback C.A. – Programmer | July 2019 – August 2020

- **Came Pagos:** Frontend development using React.js and Redux; responsive and modular UI, email template development.
- **Medullaris:** Modular and responsive frontend development with React.js.
- **El Callao:** Frontend development (HTML, CSS, JavaScript, Bootstrap) and multilingual updates (Spanish/English) using PHP.

- **Abitab:** Frontend development for admin panel using Yii2, Bootstrap, and JavaScript.

Villartech C.A. – Fullstack Web Developer | December 2018 – April 2019

- **Blockstart:** RESTful API development with Laravel; frontend built with React.js and Redux.

Develoop Software (Freelance) – Fullstack Web Developer | May 2017 – October 2018

- **Callmed:** Data handling, frontend libraries, WebSocket integration, CRUD operations, geolocation, Google APIs; Laravel MVC + Vue.js.
- **Audita:** Backend development in Laravel with server-side data processing.
- **Aignep:** Advanced frontend (jQuery, JavaScript, Three.js) and backend (Laravel + Doctrine). Developed a dynamic, multilingual platform with canvas-based compressor design tools and extensive QA testing.

Sisteberca, C.A. – Web Developer | September 2016 – December 2016

- **Banesco Panamá:** WordPress platform modifications, plugin integration, and custom code changes.
- **Regala:** Auction platform (not released), developed with Laravel, Bootstrap, and JavaScript; database design and UI implementation.

Udatabox – Web Developer | July 2015 – June 2016

- Developer using Yii2, jQuery, and Ajax.
